# Introduction

The aim of this document is to describe and document the target application by providing information about functionalities, layout, user activities and non-functional requirements.

The final product is a fully functional Ecommerce with the capability of accepting payments via Ether, which is a cryptocurrency widely used worldwide and in the web.

Except the above mentioned points, all the other functionalities are similar to any other ecommerce application.

The used technologies to develop the ecommerce will be:

- Node JS
- React
- MySQL
- CSS
- Solidity ( smart contract deployment)

# Functionalities

## Roles

The application will accept three different types of roles:

- Visitor: allows to visit the page, add products to the cart without being able to complete the payment process
- User: same possibilities as Visitor but with the possibility to complete the purchase
- Admin: allows to access hidden functionalities such as adding/updating products, displaying orders, user information and sales data

## User authentication with access & refresh token

User will be able to register and login, after a successful login the backend will store and provide access token and refresh token with different expiration dates, this functionality will allow the user to stay logged in for more time without having to enter the credentials as many times as he logs in.

### Admin panel

Admin panel allows the user to manage the products, their availability and their different attributes such as color and size.

In addition to the product management, the admin panel gives the possibility to view all the orders and payments made.

### Bank transfer payments

The platform will accept payments via bank transfer with the help of third parties services in order to avoid storing credit card details in the database.

### Ether payments

In addition to bank transfer payment, the user will have the possibility to pay using ethers via the Metamask wallet which is a Chrome extension that allows to accept transaction and manage the wallet containing ethers.

The payment will be possible thanks to a smart contract written in solidity, stored and executed on the blockchain.

### Cart products management

The user/visitor will have the ability to add products into the cart.

### Sales report

The application will help the administrator managing and reporting the sales data by retrieving all the payments received.

### Account management

Users will be able to edit personal information in the account section

## **Fixed page elements**

The navigation panel, footer, and shopping cart will all be permanent page elements.

## **Links inside the portal**

In order to prevent problems with the user's present location when they are navigating the shop, the linking functionality will be handled by the React component known as Link.

## **Navigation**

Navigation will be possible thanks to the navigation panel which will hide some links based on the current user's roles.

## **Search and Filter**

The filter will allow the user to search for products and categories by looking in all the available fields.

## **File zone**

Product images will be saved on Amazon S3 while static images such as background and logo will be saved in the root directory.

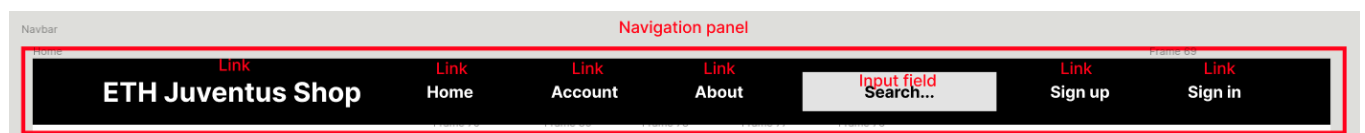

## **Start page**

As in an ecommerce the main objective is to sell product, the catalog will be able the start page of the shop.

# GUI Layout

## Common components

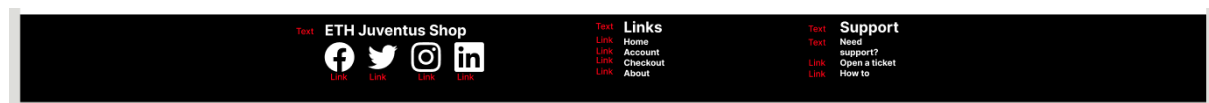

### Navigation panel

Links such as Account, Sign up, Sign in, Log out, Admin will be visible based on the current user role:

- User: Account, Log out
- Visitor: Sign in, Sign up
- Admin: Account, Admin, Log out

### Footer

### Table

	Table header				
	#	Subject	Created At	Status	Messages
Table body	Text 1	Order not delivered Text/Input	2023-01-14 01:06 Text/Input	Waiting for your input Text/Input	 Button 60 x 22

## About

## About Us

Welcome to our online store, dedicated to providing fans of the legendary **Juventus Football Club** with official merchandise. We are passionate supporters of the team ourselves, and we understand the importance of showing your love for the Bianconeri through high-quality, authentic apparel.

We are proud to be one of the few e-commerce shops that accepts **Ether** as a payment method, making it easy for our customers to get their hands on the latest Juventus gear. We offer a wide range of products, all featuring the iconic black and white stripes and the Juventus crest.

Whether you're looking for a gift for a fellow fan or want to treat yourself, we have something for everyone. Thank you for choosing our store and **Forza Juve!**

## What is Ether?

Ether (ETH) is a **cryptocurrency** that is used to pay for transactions on the **Ethereum network**. To use it to pay for goods or services, you will need to have a digital wallet that supports Ether. Some popular options include **MyEtherWallet**, **MetaMask**, and **Ledger Live**.

## How to pay with Ether

Text

### Install Metamask extension

List

Go to the MetaMask website (<https://metamask.io/>) and click on "Get MetaMask for" and select your browser.

Click on "Add to Browser" and confirm the installation.

A MetaMask icon will appear in the top right corner of your browser. Click on it to open the MetaMask interface.

Click on "Create a Wallet" to set up a new account.

Read and accept the terms of use, and then create a strong password to protect your account.

Click on "Next" to generate a seed phrase (a series of words that you will use to restore your account if you ever need to). Write down the seed phrase and store it in a safe place.

Confirm your seed phrase by clicking on the words in the correct order.

Your MetaMask account is now set up and ready to use. You can use it to interact with dApps, manage your cryptocurrency assets, and make transactions on the Ethereum network.

It is important to keep your seed phrase safe and secure, as losing it will mean losing access to your account and any assets it contains.

Text

### Buy ethers

List

Sign up for an account on a cryptocurrency exchange that supports Ether, such as Coinbase, Binance, Kraken, etc.

Verify your identity by providing the required personal information and documentation.

Link your bank account, debit card or credit card to the exchange account.

Navigate to the Ether trading pair and place a buy order. You can either buy at market price or set a limit order at a specific price.

Confirm the details of the transaction and complete the purchase.

The Ether will then be deposited into your exchange account.

From there, you can withdraw the Ether to your digital wallet by providing the wallet's public address and the amount of Ether you wish to transfer.

Text

### Purchase products & Accept Transaction

List

Add the desired items to the cart and fill out the needed shipping address information.

If your wallet is not connected, the 'Connect your wallet' button displays; clicking it connects your wallet to the site.

When the button 'Pay with ETH' is available, clicking it will open a popup window from Metamask with all the transaction details, including the amount to pay and gas fees.

After verifying the data, the 'Confirm' button must be clicked to finalize the transaction.

The status of your payment will be communicated as soon as it is processed.
